When charging is done, first disconnect the AC charging adapter from the power source, then disconnect the barrel connector of the AC charging adapter from your jump starter. Before charging, you should check the battery level percentage to ensure it's not already 100% full by pressing and holding the battery status button at the front of the unit. You have to obtain a separate compatible AC adapter that's CE / FCC / RoHS certified to charge it at home.

Connect the plug end into an AC power source in your home. Once charging has begun, it will show on the LED display that it's in charging mode. Even when left alone, the battery discharges by itself and should be recharged periodically to maintain maximum battery capacity. Always wear eye protection when charging your jump starter. The jump starter should be charged immediately after a single use to prolong battery life. This manual will explain how to use the Instant Power safely and effectively. Please read and follow these instructions and precautions carefully.
